EcoBit Technology

01

EcoBit is the latest in crypto credit offered to the general public which has its foundation built on sustainable green projects. EcoBit uses a tried and tested blockchain technology called NEM, the same technology being used in a commercial blockchain called Mijin which is currently being tested by financial institutions and private companies in Japan and internationally.

EcoBit members will get to share in this very prestigious global eco program by becoming part of the EcoBit family. With its value being supported by NEM blockchain technology, blockchain ledgers will be used to track all the credits involved in transactions and to maintain an accurate position of how much credit one actually owns. These EcoBit credits can be used for eco-programs and personal benefits as the NEM platform provides services such as payments, messaging, asset making and naming system. More personal benefits will be announced from time to time to benefit the EcoBit family. The changes of value of EcoBit credits will be securely managed using the same blockchain technology.

The on-going growth of EcoBit value is backed by the economic and financial gains © EcoBit 2017

accorded by the mega programmes of green ecology planned out. Income generated from EcoBit credits, and eco-projects such as Spirulina farming, Aquaponic farming will be used to grow the EcoBit Global Ecosystem around the world. Members of the EcoBit
